

## Fundamentals of Additive Manufacturing

1. GENERAL			
<b>SCHOOL</b>	Faculty of Sciences in collaboration with Faculty of Engineering, Aristotle University of Thessaloniki		
<b>DEPARTMENT</b>	Materials Science and Engineering		
<b>LEVEL OF STUDIES</b>	ISCED level 7 (5-year Integrated Master's programme) ISCED level 6 (4-year BSc programme)		
<b>COURSE CODE</b>	MSEN 711	<b>SEMESTER</b>	7th Semester
<b>COURSE TITLE</b>	<b>Fundamentals of Additive Manufacturing</b>		
<b>TEACHING ACTIVITIES</b> Lectures, tutorials/problem sessions, laboratory/computer exercises (where applicable), case studies and guided self-study.		<b>TEACHING HOURS PER WEEK</b>	<b>ECTS CREDITS</b>
		4 (2L + 2Lab)	6
<b>COURSE TYPE</b>	Scientific area / Skill development		
<b>PREREQUISITES</b>	Introduction to Materials Science and Engineering; basic CAD familiarity recommended.		
<b>TEACHING AND EXAMINATION METHODS</b>	Lectures plus laboratory/workshop sessions; team project on Design for Additive Manufacturing (DfAM); final exam and project deliverables.		
<b>COURSE OFFERED TO ERASMUS STUDENTS</b>	Yes (taught in English, subject to minimum enrollment).		
<b>COURSE URL</b>	<a href="https://elearning.auth.gr/course/view.php?id=xxxxx">https://elearning.auth.gr/course/view.php?id=xxxxx</a>		

2. LEARNING OUTCOMES	
<b>Learning Outcomes</b>	<ul style="list-style-type: none"> <li>Describe major AM process families (polymer, metal, ceramic) and their process-structure-property relationships.</li> <li>Select AM processes based on part requirements, material constraints, and economic considerations.</li> <li>Apply Design for Additive Manufacturing (DfAM) rules for geometry, supports, tolerances, and anisotropy.</li> <li>Identify typical AM defects (porosity, lack of fusion, residual stresses) and propose mitigation strategies.</li> <li>Plan post-processing routes (heat treatment, HIP, machining, surface finishing) appropriate to the process.</li> <li>Execute a basic AM workflow from design to build preparation to evaluation within a team project.</li> </ul>
<b>General Skills</b>	<ul style="list-style-type: none"> <li>Hands-on engineering practice and safety awareness</li> <li>Teamwork and project management</li> <li>Digital skills (CAD, slicing/build preparation)</li> <li>Critical evaluation of emerging technologies</li> </ul>

### 3. COURSE CONTENT

- AM overview: opportunities, limitations, and industrial adoption.
- Polymer AM: material extrusion, vat photopolymerization, powder bed fusion (polymers).
- Metal AM: laser/e-beam powder bed fusion, directed energy deposition; feedstocks and machines.
- Ceramic and composite AM (overview) and emerging multi-material printing.
- DfAM fundamentals: topology optimization concepts (overview), lattice structures, support strategies.
- Process-structure-property: thermal histories, anisotropy, microstructure, residual stresses.
- Quality assurance: in-situ monitoring (overview), inspection, mechanical testing, standards overview.
- Post-processing: stress relief, heat treatment, HIP, machining, surface finishing.
- Economics and sustainability of AM; case studies and a team project.

### 4. LEARNING & TEACHING METHODS - EVALUATION

<b>Teaching method</b>	Face-to-face. Lectures, hands-on lab/workshop sessions, and a team design-and-build project.	
<b>Use of ICT</b>	CAD and build preparation software in lab sessions; e-learning for tutorials and submissions; use of simulation/monitoring datasets (where available).	
<b>Teaching organization</b>	The supervised and unsupervised workload per activity is indicated below (total workload complies with ECTS standards).	
	<b>Activity</b>	<b>Workload/semester (hours)</b>
	Lectures	26
	Laboratories / workshops	26
	Team project (design-build-evaluate)	30
	Independent study	50
	Exam preparation	16
	Final written exam	2
<b>Total</b>	<b>150</b>	
<b>Student evaluation</b>	Assessment language: English. Methods: final exam (35%), team project deliverables (report/design files/print evaluation) (45%), quizzes/short assignments (20%). Students are informed via the course guide and e-learning announcements.	

### 5. SUGGESTED BIBLIOGRAPHY

#### EUDOXUS

To be specified in EUDOXUS.

#### Additional bibliography for study

- I. Gibson, D.W. Rosen & B. Stucker, Additive Manufacturing Technologies.
- T. Wohlers (ed.), Wohlers Report (selected recent editions, where available).
- ISO/ASTM standards and guidelines for additive manufacturing (selected).

- Selected open courseware notes (indicative): MIT additive manufacturing course materials.
