

## Materials and Systems in Energy Technologies

1. GENERAL			
<b>SCHOOL</b>	Faculty of Sciences in collaboration with Faculty of Engineering, Aristotle University of Thessaloniki		
<b>DEPARTMENT</b>	Materials Science and Engineering		
<b>LEVEL OF STUDIES</b>	ISCED level 7 (5-year Integrated Master's programme) ISCED level 6 (4-year BSc programme)		
<b>COURSE CODE</b>	MSEN 822	<b>SEMESTER</b>	8th Semester
<b>COURSE TITLE</b>	<b>Materials and Systems in Energy Technologies</b>		
<b>TEACHING ACTIVITIES</b>	Lectures, tutorials/problem sessions, laboratory/computer exercises (where applicable), case studies and guided self-study.	<b>TEACHING HOURS PER WEEK</b>	<b>ECTS CREDITS</b>
		4 (3L + 1T)	6
<b>COURSE TYPE</b>	Background / General Knowledge		
<b>PREREQUISITES</b>	none		
<b>TEACHING AND EXAMINATION METHODS</b>	Face – to – face lectures and guided problem-solving sessions; final written examination.		
<b>COURSE OFFERED TO ERASMUS STUDENTS</b>	Yes		
<b>COURSE URL</b>	<a href="https://elearning.auth.gr/course/view.php?id=xxxxx">https://elearning.auth.gr/course/view.php?id=xxxxx</a>		

2. LEARNING OUTCOMES	
<b>Learning Outcomes</b>	<p><b>Knowledge</b></p> <p>After successfully completing the course, students will be able to:</p> <ul style="list-style-type: none"> <li>• Explain how materials properties, microstructure and interfaces govern the performance of energy-related devices and systems.</li> <li>• Describe the roles of electrodes, electrolytes, separators and composite architectures in representative energy technologies such as batteries, electrochemical capacitors and fuel cells.</li> <li>• Understand transport phenomena (ionic, electronic, thermal and mass transport) in materials used within energy devices.</li> <li>• Interpret degradation mechanisms, aging processes and failure modes arising from materials selection and operating conditions.</li> <li>• Relate materials processing routes and interfacial design to efficiency, durability and reliability at the device and system level.</li> </ul> <p><b>Skills</b></p>

	<p>Upon completion, students will be able to:</p> <ul style="list-style-type: none"> <li>• Apply materials science principles to analyze structure-property-performance relationships in energy-related systems.</li> <li>• Evaluate materials selection criteria using performance metrics such as stability, conductivity, capacity and efficiency.</li> <li>• Perform basic characterization and performance assessment of materials and components within energy devices using laboratory measurements and diagnostic tools.</li> <li>• Analyze experimental data to identify materials-limited performance and degradation effects.</li> </ul> <p><b>Abilities / Competences</b> Students will develop the ability to:</p> <ul style="list-style-type: none"> <li>• Integrate materials science concepts across length scales to assess the behavior of materials in functional energy devices.</li> <li>• Assess trade-offs between materials properties, processing complexity and system-level performance.</li> <li>• Identify materials-driven limitations and opportunities for improving device durability and reliability.</li> <li>• Communicate materials-focused analyses and experimental findings clearly in written and oral formats.</li> <li>• Connect this course with advanced subjects such as functional materials, interfaces, corrosion, electrochemistry and materials characterization.</li> </ul>
<p><b>General Skills</b></p>	<ul style="list-style-type: none"> <li>• Practical application of knowledge</li> <li>• Search, analysis and synthesis of data and information</li> <li>• Autonomous work</li> <li>• Teamwork</li> <li>• Working in a multidisciplinary environment</li> </ul>

### 3. COURSE CONTENT

This course introduces materials-oriented principles underlying energy technologies, with emphasis on how material properties, interfaces and architectures govern the performance of functional devices and engineered systems. Building on concepts from electrochemical and materials science, students examine the role of electrodes, electrolytes, interfaces and composite structures in representative energy technologies such as batteries, electrochemical capacitors and fuel cells. The course highlights structure-property-performance relationships, materials selection criteria, transport

phenomena and degradation mechanisms relevant to materials used in energy-related applications. Attention is given to how processing routes, microstructure and interfacial design influence efficiency, durability and reliability at the device and subsystem level. Laboratory demonstrations focus on materials characterization and performance assessment within energy-related systems, including electrochemical response, stability metrics and diagnostic analysis. By the end of the course, students will understand how materials science principles enable the design, optimization and integration of materials into complex energy technologies.

#### 4. LEARNING & TEACHING METHODS - EVALUATION

<b>Teaching method</b>	Face-to-face.																
<b>Use of ICT</b>	<p>ICT will be used in teaching the course, and in communication with students:</p> <ul style="list-style-type: none"> <li>teaching of the course with modern distance learning (ZOOM) and asynchronous education tools via elearning platform of AUTH,</li> <li>communication with students via email, ZOOM, and elearning platform of AUTH.</li> </ul>																
<b>Teaching organization</b>	<p>The supervised and unsupervised workload per activity is indicated below (total workload complies with ECTS standards).</p> <table border="1"> <thead> <tr> <th>Activity</th> <th>Workload/semester (hours)</th> </tr> </thead> <tbody> <tr> <td>Lectures</td> <td>32</td> </tr> <tr> <td>Laboratory work</td> <td>18</td> </tr> <tr> <td>Bibliographic Research</td> <td>16</td> </tr> <tr> <td>Written assignments</td> <td>32</td> </tr> <tr> <td>Study</td> <td>50</td> </tr> <tr> <td>Final written exam</td> <td>2</td> </tr> <tr> <td><b>Total</b></td> <td><b>150</b></td> </tr> </tbody> </table>	Activity	Workload/semester (hours)	Lectures	32	Laboratory work	18	Bibliographic Research	16	Written assignments	32	Study	50	Final written exam	2	<b>Total</b>	<b>150</b>
Activity	Workload/semester (hours)																
Lectures	32																
Laboratory work	18																
Bibliographic Research	16																
Written assignments	32																
Study	50																
Final written exam	2																
<b>Total</b>	<b>150</b>																
<b>Student evaluation</b>	<p><b>Assessment language</b> The assessment language is English.</p> <p><b>Assessment methods</b> Written Assignment (Summative), Performance / Staging (Summative), Written Exam with Problem Solving (Summative)</p> <p><b>Student information</b> Students are informed about the assessment process through:</p> <ul style="list-style-type: none"> <li>The course outline distributed in the first lecture.</li> <li>Detailed instructions for the written assignment and presentation posted on the course website.</li> </ul> <p>A dedicated assessment briefing during tutoring time where expectations and criteria are explained.</p>
